

1 **ABSTRACT OF THE DISCLOSURE**

2 A circuit breaker includes a housing having an open top and a closed bottom,
3 with a button pivotally connected to the housing at the open top, and with a grounding
4 prong, an output blade and an input blade extending out of the housing through the
5 closed bottom. The output blade has an inner end provided with a first contact. The input
6 blade has an inner end formed with a bimetal strip that is provided with a second contact
7 normally engaged with the first contact. The button is further formed with a leg
8 extending towards the strip, and a hook is pivotally connected to the leg and has an arm
9 beneath the strip. A neon indicator has first and second terminals. The second terminal is
10 electrically connected to the output blade, and a resistor is electrically connected
11 between the grounding prong and the first terminal of the neon indicator.
